PROFESSIONAL SUMMARY

Backend-focused Software Developer with 2+ years building and shipping production systems — from REST APIs and AI-integrated workflows to payment infrastructure and cloud deployments on AWS. Experienced in leading small teams end-to-end: gathering requirements, architecting solutions, and owning deployment. Comfortable across the full backend stack (Python, PHP, MySQL) with a strong bias toward clean API design, query-level optimization, and systems that scale.

TECHNICAL SKILLS

Backend & APIs	Python (FastAPI, Flask), PHP (Laravel), REST API Design, JWT, OAuth 2.0, OTP Auth
Databases	MySQL (query optimization, indexing), MSSQL
Cloud & Infra	AWS (EC2, S3), PM2, IIS, Linux server management
AI & Integrations	Google Vertex AI (Virtual Try-On), Razorpay Payment Gateway
Dev Tools	Git, Postman, JavaScript, jQuery
Practices	MVC, OOP, API performance tuning, legacy code migration, team mentorship

PROFESSIONAL EXPERIENCE

Software Developer | [Textronics Design System](#), Navi Mumbai

April 2023 – Present

- Led a team of 3–4 junior developers, owning the full project lifecycle — requirements gathering, technical blueprinting, coding, and zero-downtime deployment from 0 to 100%.
- Designed and maintained 20+ REST API endpoints handling 50–100 requests/minute for 15–20 enterprise customers across B2B and B2C product surfaces.
- Integrated Google Vertex AI Virtual Try-On model, enabling real-time garment visualization on user-uploaded photos and onboarding 4–5 enterprise clients onto the AI-powered workflow.
- Built multi-layered auth system with OTP verification, Google OAuth 2.0, JWT refresh tokens, 30-min session expiry, and IP-based rate limiting — securing 10–15 daily active users.
- Integrated Razorpay payment gateway for annual subscription billing, diagnosed and resolved failed payment retry failures across 15–20 active business customers.
- Deployed and managed 3–4 production Python services and a frontend app on AWS EC2, maintaining stable cloud infrastructure for live enterprise customers.
- Executed a zero-downtime PHP 7.4 → 8.1 migration across an 8-module Laravel codebase, cutting page load time by 4–5 seconds with no production incidents.
- Optimized MySQL query execution and indexing across core APIs, reducing average response time by ~32% at peak loads of 100 requests/minute.

KEY PROJECTS

AI-Integrated Customer Platform — Tech Stack: *Python, FastAPI, Flask, Vertex AI, AWS EC2, MySQL*

- Architected full backend infrastructure — 20+ API endpoints, AWS EC2 deployments — supporting 15–20 enterprise customers at 50–100 requests/minute.
- Integrated Google Vertex AI Virtual Try-On, replacing a broken manual draping process and enabling AI-powered garment visualization at scale.
- Built end-to-end payment and auth layer: Razorpay subscriptions, failed payment recovery, JWT refresh tokens, and IP-rate-limited OTP.

Vendor Management System — Tech Stack: *PHP 8.1, Laravel, MySQL, JavaScript*

- Developed a fabric customization engine supporting 6–7 product categories with 40–50 configuration options each (collar, cuff, sleeves), used daily for order management.
- Executed zero-downtime PHP 7.4 → 8.1 Laravel migration, reducing page load time by 4–5 seconds with no customer-facing disruption.

Tailori Customization Panel — Tech Stack: *JavaScript, jQuery, C#, MSSQL, AWS IIS*

- Integrated an advanced JS customization plugin across 6–7 garment categories with 40–50 options per product on AWS IIS cloud hosting.
- Traced and resolved MSSQL data flow bugs in a .NET backend, restoring accurate customization data rendering for end customers.

EDUCATION

Bachelor's Degree in Information Technology

Graduated 2022

B.K. Birla College, Mumbai
